## Enhance the food flavours.

You can set the infusion time of each food. The machine can keep the food to be marinated under compression up to 10 minutes. Result dramatic change in texture and colour. Transform crispy and light food texture into a dense meaty texture.

## Great help in the sous-vide cooking.

You can cook vacuum packed food using the sous-vide cooking technique. This helps to respect and preserve all the organoleptic food properties. Less weight loss and optimisation of the cooking time and preparation.

## Seal hot food.

Thanks to the special sensor which detects the food boiling and evaporation point, you can pack even hot or liquid foods without chilling them down before.

## Great help in the sous-vide cooking.

You can cook vacuum packed food using the sous-vide cooking technique. This helps to respect and preserve all the organoleptic food properties. Less weight loss and optimisation of the cooking time and preparation.

## Print a label according to the HACCP regulations.

The unique printer integrated into the machine which gets the data directly from the control board and prints the exact vacuum and gas percentage according to the HACCP regulations. The machine can print one or more labels at the same time with a lot of useful information: ingredients, packed date & time, expiration date, lot of production, name of the operator.
